

WHAT IS CLAIMED IS:

1. A service equipment for use in a remote operating system which includes a portable telephone which is capable of connecting to an internet through a portable telephone network and browsing home pages and a remote operation adaptor connected to the communication line and capable of controlling home electric appliances, said service equipment comprising:

a service equipment unit, connected to a communication line, for providing home pages,

wherein said service equipment unit provides said portable telephone with home pages on a screen for giving an instruction to operate a home electric appliance, and transmits to said remote operation adaptor the contents of the operation of the home electric appliance for which an operating instruction is given by said portable telephone on a home page, and

wherein said remote operation adaptor receives the contents of the operation of the home electric appliance transmitted from said service equipment unit through said communication line and thus controls the home electric appliance connected to said remote operation adaptor.
